

PLACARD CONDITION

PLACARD COLOR:

Make sure the placard color has not faded from the original color. We received a violation for an explosives placard that faded from the Class 1 Explosives **ORANGE**, and looked more like Class 5.1 Oxidizer **YELLOW**:

Placards **MUST** be removed entirely after the hazardous material has been unloaded from the trailer/flatbed. Ensure that there are **NO** remnants of placards on the shipping container.

Placards that are peeling and not properly adhered can also result in a roadside inspection violation!

PLACARD APPLICATION:

PLACARD ALL 4 SIDES:

Make sure the hazmat on your shipping papers (that require placards) are represented on all 4 sides of the trailer/flatbed/shipping container!!
